3DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group I is acknowledged. The traversal is on the ground(s) that Group I and Group II are in the same class and incorporate the same technology.. This is not found persuasive because Group II is clearly distinct because it involves base extension in determining SNPs. The requirement is still deemed proper and is therefore made FINAL.

Claims 15-39 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement. Pending claims are 1-14.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out

Art Unit: 1637

the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chee et al (WO98/56954 17 December 1998) in view of Fidanza et al (J. Am Chem. Soc. Vol.111 1989 pp. 9117-9119).

Chee et al teach an array with probes which bind to labeled targets both DNA and RNA (see whole doc.).

Chee et al do not teach phosphorothioate conjugation.

Fidanza et al teach phosphorothioate conjugation with iodoacetamide (see whole doc.)

One of ordinary skill in the art would have been motivated to apply Fidanza et al's conjugation to Chee et al's detection method in order to increase the facility of attaching reporter groups. Fidanza et al states that the phosphorothioate conjugation provides increased facility in attachment and placement of reporter groups which allowed detailed study in structure and function. Moreover, no cleavage occurs at the sight of attachment. It would have been prima facie obvious to apply Fidanza et al's teaching of phosphorothioate conjugation to various targets such as cDNA , RNA and DNA to Chee et al's detection system to better study the structure and function of target nucleic acids.
